## TELECOMMUNICATIONS CONSOLIDATION POINT BOXES

In response to our customer's needs **Code Electric Products** is proud to introduce telecommunications consolidation point boxes as stock items.

The consolidation point, which is in the consolidation box, is an interconnection point within the horizontal cabling. It differs from the multi-user telecommunications outlet assembly in that it requires an additional connection for each horizontal cable run. A consolidation point may be useful when reconfiguration is frequent, but not so frequent as to require the flexibility of the multi-user telecommunications outlet assembly. No more than one consolidation point shall be used within the same horizontal cable run. Each horizontal cable extending to the work area outlet from the consolidation point shall be terminated to a telecommunications outlet/connector or multi-user telecommunications outlet assembly.

The enclosures are manufactured from 12 Ga Aluminum.

They have lift off cover with thumb latch.

Options include: Back Panels, and 1/4 Turn Locks.

1/4 Turn Thumb Latch

Optional  
BackPan

Raised Mounting  
Foot
